

ITESH SINGH

Backend Developer | Python | Django | Django REST Framework | PostgreSQL

8009138841 • itesh5906@gmail.com • Roorkee, Uttarakhand | Open to Relocate • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Backend Developer with hands-on experience building and deploying production-grade web applications using Python, Django, DRF, PostgreSQL, Redis, and Docker. Skilled in designing scalable REST APIs, JWT authentication, role-based access control, real-time WebSockets, OAuth 2.0, and third-party integrations (PayPal, Gmail API). Active GitHub contributor with consistent commit history. Seeking Backend / Python-Django Developer roles — open to internships and full-time fresher positions, willing to relocate.

TECHNICAL SKILLS

Languages:	Python, SQL
Frameworks:	Django, Django REST Framework (DRF), Django Channels
Databases:	PostgreSQL, SQLite, Redis
Tools:	Git, GitHub, Linux, VS Code, Postman, Docker, Docker Compose, Render, Railway
Web:	HTML, CSS, Tailwind CSS, Bootstrap
Concepts:	REST APIs, JWT Auth, RBAC, WebSockets, OAuth 2.0, Swagger Docs, Payment Integration

PROJECTS

CampusRefer

Django • DRF • PostgreSQL • Redis • Django Channels • WebSockets • Tailwind CSS • Render

[GitHub Repo](#) | [Live Demo](#)

- Built a full-stack alumni mentorship and job referral platform connecting students with alumni — with connection requests, job posts, resume-based applications, and status tracking, deployed live on Render.
- Designed role-based access control (RBAC) for Student, Alumni, and Admin roles with separate permission-gated dashboards and API endpoints secured via JWT authentication.
- Implemented real-time notifications and direct messaging using Django Channels, Redis, and WebSockets — zero page refresh required for live updates.
- Built and Swagger-documented 15+ REST API endpoints covering auth, job posts, applications, connections, and status updates using Django REST Framework.
- Handled resume file upload, application status pipeline (Applied → Shortlisted → Rejected), and admin moderation — full production-ready feature set.

Ecommerce Platform

Django • PostgreSQL • Gmail API • OAuth 2.0 • PayPal Sandbox • Bootstrap • Render

[GitHub Repo](#) | [Live Demo](#)

- Built a production-ready ecommerce application covering authentication, product catalog, cart, checkout, payments, order history, product reviews, and profile management — deployed on Render with PostgreSQL.
- Integrated Gmail API with OAuth 2.0 for transactional emails (account verification, password reset) — replacing basic SMTP with a secure token-based email flow.
- Implemented PayPal Sandbox for end-to-end payment processing with success confirmation, invoice-style order detail pages, and payment status tracking.
- Structured with modular Django apps, environment-based config via python-decouple, admin honeypot protection, and PostgreSQL-backed cloud deployment.

EDUCATION

Bachelor of Computer Applications (BCA)

COER University, Roorkee, Uttarakhand

2023–2026 | Awaiting Results

Class XII — CBSE Board

Kendriya Vidyalaya No. 2, Roorkee

2023

Class X — CBSE Board

Kendriya Vidyalaya No. 2, Roorkee

2021

ADDITIONAL

- Active GitHub profile with consistent commit history and multiple fully deployed, production-style projects.
- Strong self-learner — independently studied and implemented WebSockets, OAuth 2.0, Gmail API, and PayPal from documentation.
- Comfortable with Linux environments, Docker containerisation, and terminal-first development workflows.
